

WCAG Accessibility Features Cheat Sheet

■ WCAG Principles (POUR)

■ Perceivable

- Provide text alternatives for non-text content (alt text for images).
- Provide captions and transcripts for audio/video.
- Ensure content is adaptable and works with assistive technologies.
- Use sufficient color contrast between text and background.

■ Operable

- All functionality must be available from a keyboard.
- Provide enough time for users to read and interact.
- Avoid flashing content that can trigger seizures.
- Provide clear navigation and consistent menus/links.

■ Understandable

- Keep text readable and understandable.
- Provide input labels, instructions, and error messages.
- Keep navigation and UI predictable and consistent.

■ Robust

- Use semantic HTML (headings, lists, landmarks).
- Ensure compatibility with screen readers and assistive technologies.
- Follow standards for future technology support.

■ WCAG Conformance Levels

- Level A → Minimum (basic accessibility features).
- Level AA → Standard (required by most laws, includes color contrast, captions).
- Level AAA → Highest (enhanced accessibility, not always practical).

■ Common Accessibility Features

- Alt text for images.
- Keyboard navigation and focus indicators.
- Screen reader support (ARIA roles, labels).
- High color contrast and resizable text.
- Skip navigation links.
- Forms with labels, error messages, and instructions.
- Captions and transcripts for media.
- Responsive design for multiple devices.

■ Example: Accessible Image
